EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. J. Philip Polster on March 16, 2006.

The application has been amended as follows:

IN THE CLAIMS:

Claim 1, Line 6, "relatively" has been deleted,

Claim 1, Line 7, "responsive control" has been changed to --sensor--,

Claim 1, Line 8, "responsive control" has been changed to --sensor--.

The above changes to the claims have been made in order to obviate rejections under 35 U.S.C. 112 2nd paragraph.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The instant invention has been deemed to be an unobvious improvement over U.S. Patent 2,423,812 to Karl et al. Karl et al discloses a fluid coupling having an impeller (1) with an impeller casing (2) and a runner having facing cavities, radial holes (6) through the impeller casing, a reservoir (7 {Fig. 1}; 7a, 7b, 70 {Fig. 2}) collecting the fluid drained through the holes,

Art Unit: 3745

a temperature sensor (13), in the reservoir, connected to a diverter valve (free end of 13), the temperature sensor is responsive to an over temperature condition to cause the diverter valve to hold fluid in the reservoir. The improvement includes a trough having a temperature sensor wherein the bulk of fluid discharged from the holes goes to the reservoir and a small amount collects in the trough.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

U.S. Patents 2704157, 3483852, 3862541, and 4377989 each disclose a fluid coupling having a radial hole in the impeller or impeller casing.

CONCLUSION

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Leslie whose telephone number is (571) 272-4819. The examiner can normally be reached on M-F 8:00am - 4:30pm.
